ออกแบบ server โดยสร้างรูปร่างเขียนCodeออกแบบระบบเกมต่างๆ เพื่อให้client รองรับระบบที่เสถียรและแสดงผลออกมาเริ่มจากการสร้างไฟล์Unity client กับ server และเปิดไฟล์ server สร้างไฟล์ Controller

เขียนCode Server Controller

```
using System.Collections.Generic;
using UnityEngine;

Unity Script (1 asset reference) | 7 references
public class ServerController : MonoBehaviour
{
    [SerializeField]
    private Server server;

    [SerializeField]
    private PlayerController playerControllerPrefab;

    [SerializeField]
    private CoinController coinController;

    [SerializeField]
    private BombController bombController;

    [SerializeField]
    private SpawnArea spawnArea;

    private Dictionary<int, PlayerController> playerControllers = new Dictionary<int, PlayerController>();
    private List<int> playerRemoveIds = new List<int>();
    private List<int> playerDeathIds = new List<int>();

    1 reference
    public Vector3 RandomSpawnPoint() => spawnArea.RandomSpawnPoint();
```

```
    1 reference
    public void CreatePlayer(PeerConnection peerConnection)
    {
        var playerController = Instantiate(playerControllerPrefab);
        var id = peerConnection.Id;
        playerController.Setup(id, server);
        playerControllers.Add(id, playerController);
        peerConnection.AddPlayer(playerController);
    }

    1 reference
    public void Remove(PlayerController playerController)
    {
        var playerId = playerController.Id;
        playerRemoveIds.Add(playerId);
        playerControllers.Remove(playerId);
    }
```

```
1 reference
public void UpdateData()
{
    var model = new UpdateModel();

    foreach (var clientConnection in server.PeerConnections.Values)
    {
        var player = clientConnection.Player;
        if (player != null)
        {
            if (player.isUpdateScore)
            {
                var playerModel = new UpdatePlayerModel();
                playerModel.Score = player.Score;
                clientConnection.Send(playerModel);
                player.isUpdateScore = false;
            }

            if (player.isUpdatePosition)
            {
                var playerPositionModel = new PlayerPositionModel { PlayerId = player.Id, Position = player.Position };
                model.PlayerPositionModels.Add(playerPositionModel);
                player.isUpdatePosition = false;
            }
        }
    }
```

Player Controller

Assembly-CSharp | PlayerController

```
1   using System;
2   using UnityEngine;
3
4   public class PlayerController : MonoBehaviour
5   {
6       private const float MIN_MOVE_DISTANCE = 0.0625f;
7       private const float GRAVITY = 9.8f;
8       private const float LAY_BOMB_DELAY = 3f;
9
10      [SerializeField] private CharacterController characterController;
11      private BombController bombController;
12      private int id;
13      private int score = 0;
14      private ServerController serverController;
15      private Server server;
16      private Vector3 target;
17
18      private float speed = 1;
19      private float gravitySpeed = 0;
20      private bool isDeath = false;

21      public int Id => id;

22      public int Score => score;
        1 reference
23      public bool IsDeath => isDeath;
```

```
    }

    1 reference
    internal void Setup(int id, Server server)
    {
        this.id = id;
        this.server = server;
    }

    1 reference
    internal void Move(Vector3 target)
    {
        this.target = target;
    }

    Unity Message | 0 references
    private void OnCollisionEnter(Collision collision)
    {
        Debug.Log("OnCollisionEnter");
        Debug.Log(collision.gameObject.name);
    }
}
```

, และสร้างโฟรเดอร์Scriptsเขียน Code Server

```
        }

        foreach (var pair in coinController.Coins)
        {
            var coinId = pair.Key;
            var position = pair.Value.transform.position;
            model.CreateCoins.Add(coinId, new Vector3Model(position));
        }
        peerConnections.Add(id, peerConnection);
        serverController.CreatePlayer(peerConnection);

        foreach (var bomb in bombController.Bombs.Values)
        {
            var bombModel = new BombModel { CurrentTime = bomb.CurrentTime, Position = bomb.transform.position };
            model.Bombs.Add(bombModel);
        }

        var playerId = peerConnection.PlayerId;
        model.PlayerId = playerId;
        peerConnection.Send(model);
    }

    1 reference
    public void OnPeerConnected(NetPeer peer)
    {
        Debug.Log("OnPeerConnected");
    }
```

2 references

```
public void OnPeerDisconnected(NetPeer peer, DisconnectInfo disconnectInfo)
{
    Debug.Log("OnPeerDisconnected");
    if (peer != null)
    {
        var peerConnection = peer.Tag as PeerConnection;
        peerConnection?.Disconnected();
    }
}
```

1 reference

```
public void Remove(PeerConnection peerConnection)
{
    peerConnections.Remove(peerConnection.Id);
}
```

, Model ToObjectMapper

```
using LiteNetLib;
using Newtonsoft.Json.Linq;
using System;
using System.Collections.Generic;
using UnityEngine;
